Residence status: Chancenkarte (German Opportunity Card) — straightforward conversion to a work permit / EU Blue Card upon employment

PROFILE

Backend engineer with 6 years of experience in Python backend development, RESTful APIs, and distributed systems (Django, Flask, PostgreSQL, Celery, Redis, Docker, AWS). Recent focus on AI integration: LLM APIs (Claude, OpenAI), agentic workflows, and automation. Experienced in international SaaS startups and enterprise environments; TDD, CI/CD, Agile/Scrum. Based in Germany; willing to relocate nationwide.

PROFESSIONAL EXPERIENCE

Software Developer (Python/Django)

Traut Euch! | Germany | June 2026 – Present

- Built an AI-powered onboarding pipeline using Playwright and the Claude API — fully automating web scraping, content extraction, and account provisioning.
- Developing a B2B publishing platform (payment processing, vendor portals, background processing); AWS production deployment in preparation.

Backend Engineer

National Pension Fund | Algeria | August 2023 – April 2026 | Full-time

- Built a financial management system from scratch (Django, PostgreSQL, Celery, Redis), replacing a legacy spreadsheet process and handling 10,000+ monthly transactions with full audit trails.
- Automated deployment, user-provisioning, and backup pipelines with Python/Bash scripts, saving ~8 hours/week of operational effort.
- Optimized critical PostgreSQL/MySQL queries, cutting average report generation time from ~45 s to under 5 s — a 9x improvement.
- Co-developed comprehensive pytest test suites and technical documentation with the team, adopted as the department-wide standard.
- Implemented CI/CD pipelines with Git and Bash scripts to streamline code deployment.

Backend Engineer

Yobi | San Jose, USA (Remote) | December 2020 – August 2023 | Full-time

- Built and maintained Dockerized REST APIs for integrations with HubSpot, Zapier, Pipedrive, Zoom, and Meta — handling 50,000+ API calls/day at peak with real-time monitoring via AWS CloudWatch.
- Developed real-time messaging backends with Redis queues and Dockerized microservices; message latency under 200 ms for enterprise customers.
- Reworked high-traffic third-party integration endpoints together with the engineering team, reducing average API response latency by ~35%.
- Implemented OAuth2 social login (Google, Apple, Facebook), directly improving onboarding conversion metrics.
- Deployed and operated services on AWS EC2 and RDS; used S3 for file storage and CloudWatch for alerting.

Python Developer

Sarl Minoteries El-Baraka | Algeria | March 2020 – December 2020

Database Lecturer

Institut National Smati Bouzid | Algeria | September 2019 – March 2020

SKILLS

Languages & Frameworks: Python, Django, Django REST Framework, Flask, Celery, SQLAlchemy

AI & LLM Integration: OpenAI API, Anthropic Claude API, prompt engineering, agentic workflows, web scraping pipelines

Databases: PostgreSQL, MySQL, Redis, SQLite

Cloud & DevOps: AWS (EC2, RDS, S3, CloudWatch), Docker, Kubernetes (basics), CI/CD, Git, Bash/shell scripting, Linux

API & Integration: RESTful APIs, OAuth2, JWT, HubSpot, Zapier, Pipedrive, Zoom, Meta APIs

Testing & QA: pytest, TDD, unit testing, integration testing

Methods: Agile/Scrum, code review, technical documentation, API design, microservices architecture

Spoken Languages: Arabic (native), English (C1), French (B2), German (A2, actively studying — targeting B1 in 2026)

EDUCATION

Master of Science, Computer Science

University Mohamed Khider, Biskra, Algeria | 2016 – 2018

Thesis: Design and development of a verification application for reconfigurable systems

PROJECTS

DealScope AI — AI-powered deal intelligence & competitor tracking platform for sales teams

github.com/abdou-chabira/DealScope-AI

- Designed and built the full backend architecture: URL ingestion, automated web scraping, and agentic AI workflows using OpenAI and Claude APIs, delivering company summaries in under 10 seconds.
- Built analytics engines for real-time competitor detection, buyer-readiness scoring, and daily/weekly delta recalculations using Celery and Redis.
- Implemented AI-powered outreach generators (email + LinkedIn) with advanced prompt engineering via OpenAI and Claude APIs, tailored to executive personas.
