Work Authorization: Valid German Residence Permit

PROFESSIONAL SUMMARY

Results-driven Senior Backend Engineer with 5+ years of experience designing and delivering scalable web applications, RESTful APIs, and cloud-native distributed systems. Core expertise in Python, Django, Flask, FastAPI, PostgreSQL, Celery, Redis, and AWS — proven across international SaaS startups and enterprise environments. Demonstrated track record of standardizing team workflows, mentoring junior engineers, and collaborating closely with engineering leads to deliver measurable performance improvements aligned with business goals. Combining deep technical execution with a collaborative, team-first mindset to support engineering leaders in delivering business value. Proficient in Agile/Scrum methodologies, test-driven development (TDD), and technical documentation. Resident in Germany since May 2026 with full work authorization; open to relocation within Germany.

PROFESSIONAL EXPERIENCE

Software Developer (Python/Django)

Traut Euch! • Germany • June 2026 – Present • Part-time (Minijob)

- Developing modern web applications and backend systems using Python and Django with PostgreSQL databases.
- Designing and integrating RESTful APIs and relational database schemas for scalable business applications.
- Building and deploying AI-driven automation solutions to optimize business processes using LLM integrations.
- Collaborating closely with the team on code reviews and shared coding standards to support consistent quality.

Backend Engineer (Contract)

Intentlead • France (Remote) • January 2025 – July 2025 • Part-time

- Developed and deployed a HubSpot CRM integration automating lead-routing workflows, reducing manual data-entry effort for the sales team by approximately 70%.
- Maintained 95%+ test coverage across a Django/Celery codebase using pytest; authored API documentation that cut developer onboarding time from 2 weeks to 3 days.
- Supported engineering leadership by facilitating weekly code reviews and aligning technical decisions with product and business goals.

Computer Engineer – Backend

National Pension Fund • Algeria • November 2022 – April 2026 • Full-time

- Architected and built a financial management system from scratch (Django, PostgreSQL, Celery, Redis) replacing a legacy spreadsheet process and processing 10,000+ monthly transactions with full audit trails.
- Automated deployment, user-provisioning, and backup pipelines via Python and Bash scripts, saving an estimated 8 hours/week of operational overhead.
- Optimized critical PostgreSQL and MySQL queries, reducing average report generation time from ~45s to under 5s — a 9x performance improvement.
- Collaborated with the team to author comprehensive pytest test suites and technical documentation, which were standardized across the engineering department.
- Implemented CI/CD pipelines using Git and Bash scripts to streamline code deployment and reduce release risk.

Python Developer (Contract)

Fintechracy • France (Remote) • October 2023 – February 2024 • Part-time

- Integrated OAuth2 Social Login (Apple, Google, Facebook) into a Django REST Framework backend, contributing to a reported 20%+ increase in user onboarding conversion.
- Designed and deployed a suite of secure RESTful API endpoints enabling seamless frontend-backend communication for a fintech mobile application, with full input validation and JWT authentication.

Backend Engineer & Integrations Lead

Yobi • San Jose, USA (Remote) • December 2020 – August 2023 • Full-time

- Developed and maintained Dockerized REST APIs supporting integrations with HubSpot, Zapier, Pipedrive, Zoom, and Meta — handling 50,000+ API calls/day at peak load with real-time monitoring via AWS CloudWatch.
- Built real-time messaging backends with Redis queues and Dockerized microservices, achieving message latency under 200ms for enterprise clients.
- Collaborated with the engineering team to refactor high-traffic third-party integration endpoints, reducing average API response latency by ~35%.
- Implemented OAuth2 Social Login (Google, Apple, Facebook), directly improving onboarding conversion metrics.
- Deployed and maintained services on AWS EC2 and RDS; used S3 for file storage and CloudWatch for alerting.

Python Engineer

Call Sumo • San Jose, USA (Remote) • February 2021 – December 2021 • Part-time

- Built automated call transcription pipelines on AWS EC2 (Python, Flask, S3), processing 5,000 calls/month with secure audio file storage and retrieval.
- Created an admin dashboard and Google Data Studio reports that reduced manual reporting effort from 4 hours/week to under 30 minutes.

TECHNICAL SKILLS

Languages & Frameworks: Python, Django, Django REST Framework, Flask, FastAPI, Celery, SQLAlchemy

Databases: PostgreSQL, MySQL, Redis, SQLite

Cloud & DevOps: AWS (EC2, RDS, S3, CloudWatch), Docker, Kubernetes (basic), CI/CD, Git, Bash/Shell Scripting, Linux

API & Integration: RESTful APIs, OAuth2, JWT, HubSpot, Zapier, Pipedrive, Zoom, Meta APIs

Testing & QA: pytest, TDD, Unit Testing, Integration Testing, 95%+ test coverage

Methodologies: Agile/Scrum, Code Review, Technical Documentation, API Design, Microservices Architecture

Languages: Arabic (Native), English (Fluent), French (Fluent), German (A2)

EDUCATION

Master of Science, Computer Science — University of Mohamed Khider, Biskra, Algeria | 2016 – 2018

Thesis: Design and Development of a Verification Application for Reconfigurable Systems

Bachelor of Science, Computer Science — University of Mohamed Khider, Biskra, Algeria | 2013 – 2016

Focus: Advanced Algorithms, Data Structures, Software Engineering (Agile, Version Control, System Testing)

PROJECTS

DealScope AI — AI-powered Deal Intelligence & Competitor Tracking Platform for Sales Teams

github.com/abdouchabira/DealScope-AI

- Architected the complete backend: URL ingestion, automated web scraping pipeline, and LLM-powered company intelligence summaries delivered in under 10 seconds.
- Built real-time analytical engines for competitor detection, buyer-readiness scoring, and scheduled delta recalculations (daily/weekly) using Celery and Redis.
