Portfolio: abdou-chabira.github.io/MyPortfolio

Valid German Work Permit · Willing to relocate within Germany

PROFILE

AI-focused Python engineer building **LLM-powered applications, AI automation pipelines, and agentic workflows**. Hands-on experience with OpenAI and Anthropic Claude APIs, prompt engineering, web scraping, structured data extraction, asynchronous processing, and production backend systems.

Built AI-powered applications from scratch using **Python, Django, Celery, Redis, Docker and AWS**, with a strong foundation in APIs, databases, testing and cloud infrastructure. Currently focused on applying software engineering experience to **AI Engineer, AI Developer and Python/LLM Engineer** roles in Germany.

FEATURED AI PROJECT

DealScope AI — AI Deal Intelligence Platform

Python · OpenAI · Anthropic Claude · Celery · Redis · Web Scraping

- Designed and built an AI-powered platform for automated company research, deal intelligence and competitor tracking.
- Developed web ingestion and scraping pipelines to collect and process unstructured company information.
- Built LLM workflows using **OpenAI and Anthropic Claude APIs** to transform unstructured data into structured company intelligence.
- Implemented asynchronous AI processing with **Celery and Redis**, including automated competitor detection and buyer-readiness analysis.
- Developed AI-powered outreach generation for email and LinkedIn using prompt engineering and LLM APIs.
- Generated company summaries from scraped data in under 10 seconds.

PROFESSIONAL EXPERIENCE

Software Developer — AI & Python

Traut Euch! | Germany | June 2026 – Present

- Built an **AI-powered business onboarding pipeline** using Python, Playwright and the Anthropic Claude API.
- Automated web scraping, content extraction, classification and account provisioning from unstructured business websites.
- Designed prompts and structured JSON outputs to transform external business information into usable business profiles.
- Developed asynchronous processing workflows using **Celery and Redis** for AI enrichment tasks.
- Developing a B2B publishing platform with payment processing, vendor portals and background processing.
- Working across backend development, AI integration, deployment and cloud infrastructure.

Backend Engineer

National Pension Fund | Algeria | August 2023 – April 2026 | Full-time

- Developed a financial management system from scratch using **Python, Django, PostgreSQL, Celery and Redis**, replacing a legacy spreadsheet-based process.
- Built asynchronous processing workflows for financial data and automated recurring business operations.
- Automated deployment, user provisioning and backup workflows using Python and Bash, reducing operational work by approximately 8 hours per week.
- Optimized PostgreSQL/MySQL queries, reducing report generation time from approximately 45 seconds to under 5 seconds.
- Developed automated tests and technical documentation using **pytest**, establishing reusable engineering practices across the department.
- Implemented CI/CD workflows using Git and Bash.

Backend Engineer

Yobi | San Jose, USA — Remote | December 2020 – August 2023 | Full-time

- Developed and maintained **Python REST APIs** for a B2B SaaS platform integrating HubSpot, Zapier, Pipedrive, Zoom and Meta APIs.
- Built asynchronous messaging and processing systems using **Redis, Docker and microservices**.

- Worked with production systems handling up to **50,000+ API calls/day**, with monitoring through AWS CloudWatch.
- Improved high-traffic third-party integration endpoints, reducing average API response latency by approximately 35%.
- Implemented OAuth2 authentication and social login integrations with Google, Apple and Facebook.
- Deployed and operated backend services using **AWS EC2, RDS and S3**.

Python Developer

Sarl Minoteries El-Baraka | Algeria | March 2020 – December 2020

Database Lecturer

Institut National Smati Bouzid | Algeria | September 2019 – March 2020

ADDITIONAL AI / PYTHON PROJECT

Call Sumo — AI Audio Processing Pipeline

Python · Flask · Celery · TensorFlow · AWS

- Built a webhook-driven asynchronous audio-processing pipeline using **Python, Flask, Celery and AWS EC2/S3**.
- Processed approximately **5,000 calls/month** without blocking the main application.
- Implemented speech-to-text transcription using TensorFlow followed by sentiment analysis of caller and callee audio.
- Designed asynchronous task processing with retries to handle variable audio-processing workloads.

TECHNICAL SKILLS

AI & LLM Engineering: OpenAI API · Anthropic Claude API · LLM Applications · Prompt Engineering · Agentic Workflows · AI Automation · Structured Data Extraction · Web Scraping Pipelines

Python: Python · Django · Django REST Framework · Flask · Celery · SQLAlchemy

Data & Databases: PostgreSQL · MySQL · Redis · SQLite · SQL

Cloud & Infrastructure: AWS (EC2, RDS, S3, CloudWatch) · Docker · CI/CD · Git · Linux · Bash/Shell · Kubernetes (basics)

APIs & Integrations: REST APIs · OAuth2 · JWT · HubSpot · Zapier · Pipedrive · Zoom · Meta APIs

Testing & Engineering: pytest · Unit Testing · Integration Testing · TDD · API Design · Code Review · Technical Documentation · Agile/Scrum

EDUCATION

Master of Science — Computer Science

University Mohamed Khider, Biskra, Algeria | 2016 – 2018

Thesis: *Design and development of a verification application for reconfigurable systems*

SELECTED AI / SOFTWARE EXPERIENCE

LLM-powered applications

- Integrated both **OpenAI and Anthropic Claude APIs** into production and personal applications.
- Designed prompts for structured business-data extraction, content generation and AI-assisted workflows.
- Built pipelines combining web scraping, asynchronous processing and LLM-based analysis.

AI automation

- Developed automated workflows that transform unstructured external business information into structured application data.
- Implemented asynchronous AI processing using **Celery + Redis** to separate long-running workloads from web requests.

Production engineering

- Experience taking Python applications from development through deployment and operation.
- Hands-on experience with AWS, Docker, databases, CI/CD, monitoring and production APIs.

LANGUAGES

English: C1

French: B2

German: A2 — actively studying

Arabic: Native

TARGET ROLES

AI Engineer · AI Developer · Junior AI Engineer · Python AI Engineer · LLM Engineer · AI Automation Engineer

Location: Germany · Open to relocation
